Annotations (notes) are made by placing text and graphics in a drawing. There are three types of annotations: AutoCAD commands, which can be typed directly into the drawing; text boxes, which are drawn directly on a drawing; and graphic objects, which can be moved, copied, and deleted as objects on a drawing. Open the New Document dialog box by clicking or Control-clicking the Open button and navigating to the folder you want to use for your new drawing. You can easily add text boxes to drawings. Select the text you want to edit by clicking or Control-clicking it on the drawing, and then press Enter. You can then type text in the new text box. To create a graphic, click the New button (see image). You can then select a graphic to use in your drawing. This includes free-form shapes, such as circles, rectangles, and ellipses. The graphic you select will be copied to the drawing and is typically named based on the part of the drawing it was copied from. To move a graphic object, select the object and click the Move button (see image). You can also use the keyboard to position the object. When a mouse is connected to the computer, you can draw shapes, free-form shapes, and text boxes on the drawing by clicking or Control-clicking the shape. To save a drawing, select the Save As dialog box (see image)
